Čo dostaneme zadarmo

(pokračujeme v minulej prednáške)

```
package com.fmph.kai.prednaska2020
```

```
import android.os.Bundle
```

```
import androidx.appcompat.app.AppCompatActivity
```

```
class MainActivity : AppCompatActivity() { // entry point pre App/Activity
```

```
    override fun onCreate(savedInstanceState: Bundle?) {
```

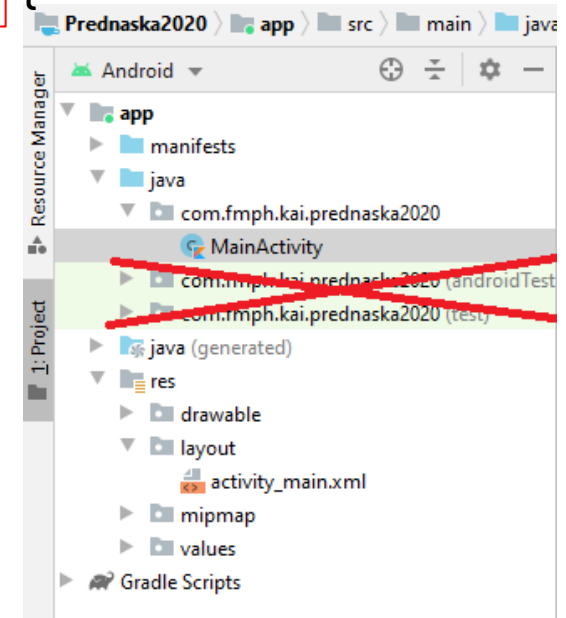

```
        super.onCreate(savedInstanceState)
```

```
        setContentView(R.layout.activity_main)
```

```
        // sem sme minule písali náš prvý kotlin kód
```

```
    }
```

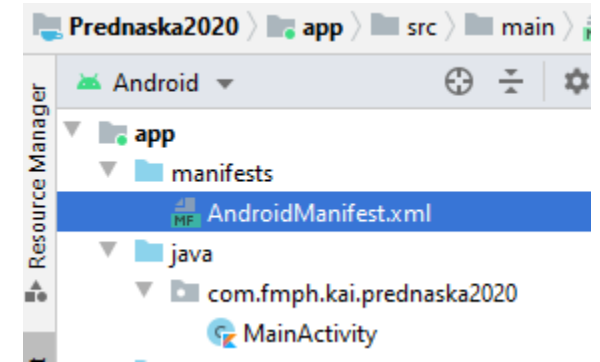

- MainActivity je inštancia triedy AppCompatActivity
- metóda onCreate() sa volá *niekde* v procese jej zobrazovania
- setContentView zobrazí layout podľa .xml popisu v R.layout.activity_main
- argument savedInstanceState:Bundle? zatiaľ neriešte
- package androidTest a test môžete vymazať, pre prehľadnosť

[EmptyApp2021.zip](#)

AndroidManifest.xml

(automaticky vygenerovaný súbor aplikácie)

```
<manifest xmlns:android="http://schemas.android.com/apk/res/android"
    package="com.fmph.kai.prednaska2020">
```

Alt-
Enter

```
<application
```

```
    android:allowBackup="true"
```

```
    android:icon="@mipmap/ic_launcher"
```

```
    android:label="@string/app_name"
```

```
    android:roundIcon="@mipmap/ic_launcher_round"
```

```
    android:supportsRtl="true"
```

```
    android:theme="@style/AppTheme">
```

```
        <activity android:name=".MainActivity">
```

```
            <intent-filter>
```

```
                <action android:name="android.intent.action.MAIN" />
```

```
                <category android:name="android.intent.category.LAUNCHER" />
```

```
            </intent-filter>
```

```
        </activity>
```

```
    </application>
```

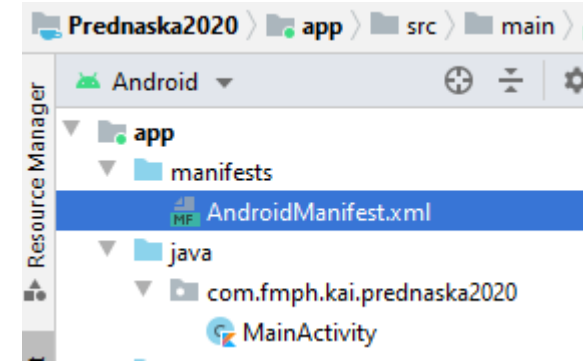

referencia na ikonu apky

referencia meno apky

```
</manifest>
```

AndroidManifest.xml

Hlavné tagy:

- **<application>** je jediný a popisuje ikony, logo, meno, štýl aplikácie
- **<activity>** môže ich byť viac a popisujú package definujúci aktivitu (analógia Screen v MITI), intent aktivity, filtre pre aktivitu, ...
- **<service>** popisujú aplikácie bežiacie na pozadí, tzv. servisy
- **<provider>** popisuje Content Provider, napr. lokálnu databázu LiteSQL
- **<receiver>** popisuje Broadcast Receiver prijímajúci nejaké intenty

AS-manifest rokmi schudobnel, mnohé veci sa presunuli do build.gradle:

- **<uses-configuration>** a **<uses-feature>**
popisujú HW predpoklady na spustenie apky, display, klávesnicu, senzory
- **<uses-supportScreens>** popisuje rozliško HVGA, QVGA, QVGA, WQVGA
- **<uses-sdk>** popisuje min./max. SDK a cieľovú verziu SDK
<http://developer.android.com/guide/topics/manifest/uses-sdk-element.html#ApiLevels>
- **<uses-permissions>** popisuje práva, ktoré apka musí mať schválené
- **<uses-library>** popisuje externé knižnice, napr. Google Maps, ...
[viac na: http://developer.android.com/guide/topics/manifest/manifest-intro.html](http://developer.android.com/guide/topics/manifest/manifest-intro.html)

build.gradle

(konfiguračný súbor pre gradle)

Gradle je build tool, podobne ako make, maven

```
plugins { id 'com.android.application'
          id 'kotlin-android'
          id 'kotlin-android-extensions' }
```

```
android {
    compileSdk 30
    defaultConfig {
        applicationId "com.example.emptyapp2021"
        minSdk 23
        targetSdk 30
        versionCode 1
        versionName "1.0"
        testInstrumentationRunner "androidx.test.runner.AndroidJUnitRunner"
    }
    ...
}
```

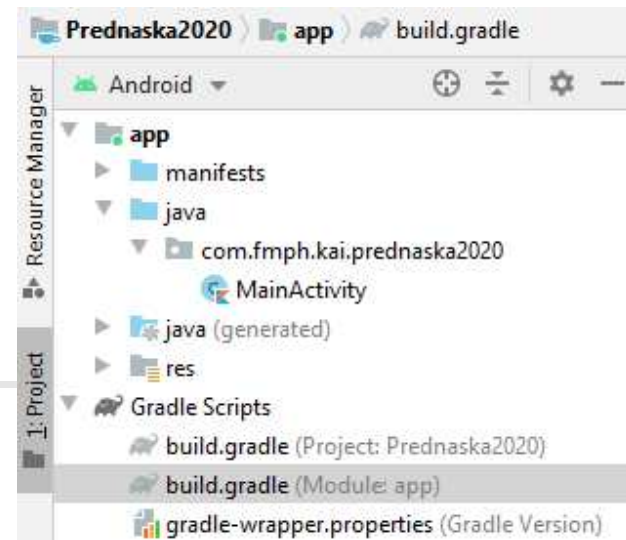

```
dependencies {
    implementation fileTree(dir: 'libs', include: ['*.jar'])
    implementation "org.jetbrains.kotlin:kotlin-stdlib-jdk7:$kotlin_version"
    implementation 'androidx.appcompat:appcompat:1.0.2'
    ...
}
```

[EmptyApp2021.zip](#)

Gradle

- je plugin-based project-build/management system v AS založený na jazyku Groovy
- už existuje Kotlin Gradle Plugin pre Gradle 6+

```
build.gradle.kts
dependencies {
    implementation("fileTree(dir: 'libs', include: ['*.jar'])")
    implementation("org.jetbrains.kotlin:kotlin-stdlib-jdk7:$kotlin_version")
    implementation("androidx.appcompat:appcompat:1.0.2")
    ...
}
```

```
dependencies {
    implementation fileTree(dir: 'libs', include: ['*.jar'])
    implementation "org.jetbrains.kotlin:kotlin-stdlib-jdk7:$kotlin_version"
    implementation 'androidx.appcompat:appcompat:1.0.2'
    ...
}
```

MergedManifest

(spája AndroidManifest a build.gradle)

```

  <manifest
    android:versionCode="1"
    android:versionName="1.0null"
    package="com.example.emptyapp2021"
    xmlns:android="http://schemas.android.com/apk/res/android"
  >
    <uses-sdk
      android:minSdkVersion="23"
      android:targetSdkVersion="30" />
    <application
      android:allowBackup="true"
      android:appComponentFactory="androidx.core.app.CoreComp
      android:icon="@mipmap/ic_launcher"
      android:label="@string/app_name"
      android:roundIcon="@mipmap/ic_launcher_round"
      android:supportsRtl="true"
      android:theme="@style/Theme.EmptyApp2021" >
      <activity
        android:exported="true"
        android:name="com.example.emptyapp2021.MainActivity"
        <intent-filter
          <action
            android:name="android.intent.action.MAIN" />
          <category
            android:name="android.intent.category.LAUNCHER" />
        </intent-filter>
      </activity>
    </application>
  </manifest>

```

    <!-- Customize your theme here. -->  
    <item name="colorPrimary">@color/colorPrimary</item>  
    <item name="colorPrimaryDark">@color/colorPrimaryDark</item>  
    <item name="colorAccent">@color/colorAccent</item>  
  </style>  
</resources>
```

Bud' kreatívny

(aspoň pri ic_launcher ikone)

Je hrozné pri opravovaní mať v tablete/mobile viacero študentských riešení s generickými/neosobnými ikonami. Preto ak sa dá, tak sa zosobnite v posielanom riešení už v ikone vašej aplikácie.

Bud' kreatívny

(a použi Asset Studio - New/ImageAsset)

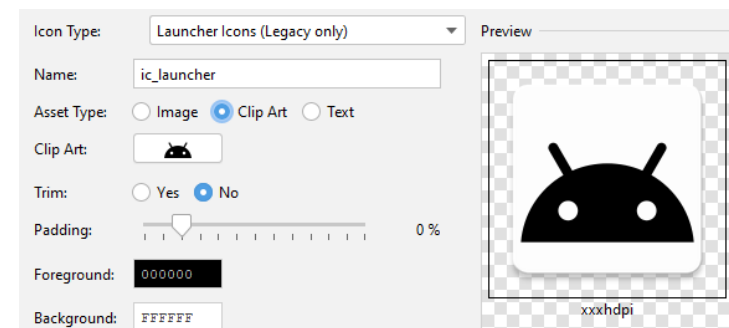

Adaptive icon

- od Android-Oreo, API 26
- umožňuje zariadeniu vhodne škálovať ikonu podľa
 - rozlíšenia 108dp, 66dp, ...
 - Orámovanie
- adaptívna ikona má pozadie a popredie
- `<adaptive-icon`
`xmlns:android="http://schemas.android.com/apk/res/android">`
`<background android:drawable="@drawable/ic_launcher_background" />`
`<foreground android:drawable="@drawable/ic_launcher_foreground" />`
`</adaptive-icon>`
- adaptívna ikona umožňuje robiť efekty pri zobrazovaní

- legacy ikona je jednoduchšia

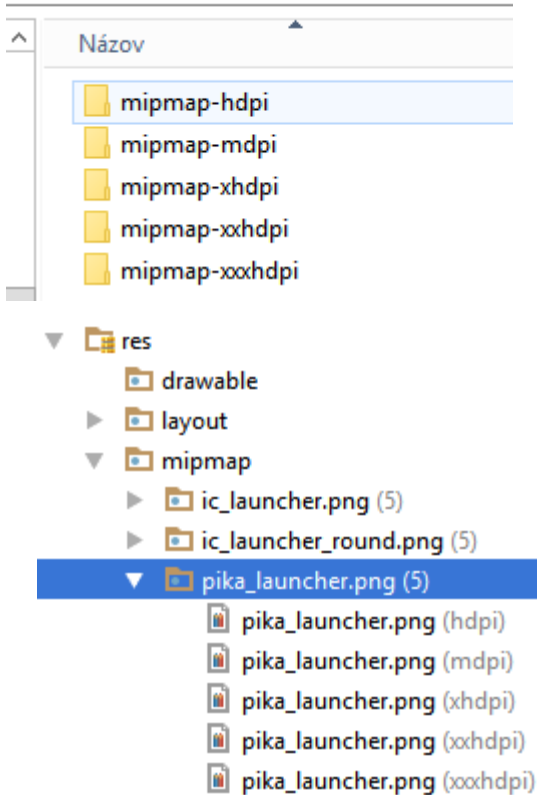

Android Asset Studio

Icon generator

výsledok priamo nakopírujeme do podadresára res
Ikony/obrázky sa
sa objavajú v projekte

Stiahnuté súbory > pika_launcher > res >

```
<application
    android:allowBackup="true"
    android:icon="@mipmap/pika_launcher"
    android:label="@mipmap/pika_launcher"
    android:roundIcon="@mipmap/ic_launcher_round"
    android:supportRtl="true"
```

EmptyApp2021.zip

Android Asset Studio

(jedna z alternatív)

<https://romannurik.github.io/AndroidAssetStudio/>

- .png, .jpg, .bmp, ...
- cliparty
- texty

Pre .svg a .psd

(a použi Vector Asset Studio - New/VectorAsset)

.svg – scalable vector graphics

.psd – photoshop document

MyFirstApp22.zip

Logovanie

Tri najbežnejšie spôsoby:

- Log
- Toast
- Snackbar – to chce pridať závislosť do build.gradle

```
dependencies {  
    implementation 'com.android.support.design:28.0.0'  
    import com.google.android.material.snackbar.Snackbar  
  
    prevBtn2.setOnClickListener({  
        Toast.makeText(this, "prev...", Toast.LENGTH_SHORT).show()  
  
        Log.d(TAG, "prev...")  
  
        Snackbar.make(it, "prev...",  
            Snackbar.LENGTH_SHORT).setAction("Action", null).show()  
        ...  
        if (--i < 0) i += imgs.size  
        imageView2.setImageDrawable(imgs[i])  
    })
```

Pikas

```
override fun onCreate(savedInstanceState: Bundle?) {
    super.onCreate(savedInstanceState)
    setContentView(R.layout.activity_main)
    var i = 0
    var imgs = arrayOf(
        ContextCompat.getDrawable(applicationContext,
                                R.drawable.butterfree),
        ...
    )
    imageView2.setImageDrawable(imgs[i])
    prevBtn2.setOnClickListener({
        Toast.makeText(this, "prev...", Toast.LENGTH_SHORT).show()
        if (--i < 0) i += imgs.size
        imageView2.setImageDrawable(imgs[i])
    })
    nextBtn2.setOnClickListener({
        Toast.makeText(this, "next...", Toast.LENGTH_LONG).show()
        i = (++i) % imgs.size
        imageView2.setImageDrawable(imgs[i])
    })
}
```

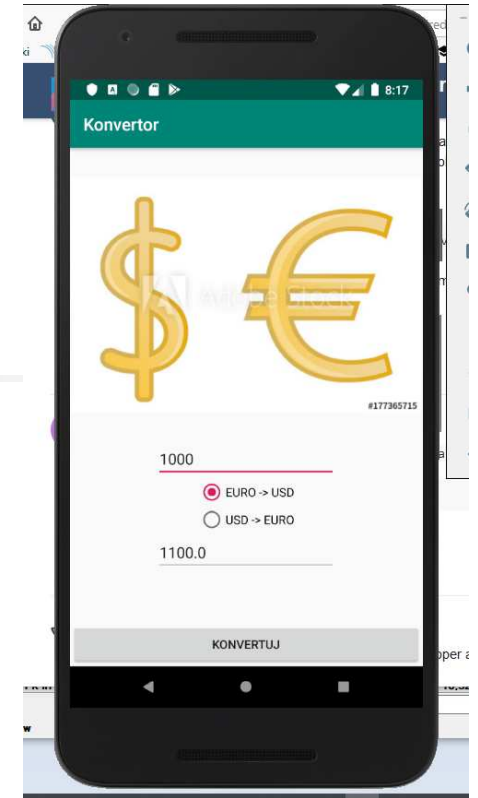

Konvertor EURO USD

(logika)

Jednoduchá aplikácia na konverziu kurzov USD EURO

- s modifikovateľným TextView pre zadanie sumy, reálneho čísla
- RadioButtonom pre výber smeru konverzie
- s nemodifikovateľným poľom pre výsledok
- Button Konvertuj pre vykonanie akcie

```
override fun onCreate(savedInstanceState: Bundle?) {  
    super.onCreate(savedInstanceState)  
    setContentView(R.layout.activity_main)  
    convertBtn.setOnClickListener({  
        Toast.makeText(this, "convert", Toast.LENGTH_SHORT).show();  
        if (inputText.text.isNotEmpty()) {  
            val input = inputText.text.toString().toFloat();  
            var output = input  
            if (eur2usd.isChecked) output = 1.1F * output  
            if (usd2eur.isChecked) output = output / 1.1F  
            outputText.setText("$output") // set  
        }  
    })

Text Fields

Material Design

- Material Design je knižnica GUI komponentov unifikovaná pre Android, iOS, Flutter, web, ...
dependencies {
implementation 'com.google.android.material:material:1.4.0'
}
- zahrňa Button, Text fields, SnackBars, Sliders, ...

The image displays two side-by-side screenshots of a 'Contacts' application form, illustrating the Material Design text field components. The left screenshot shows a dark-themed version with grey text fields and icons. The right screenshot shows a light-themed version with white text fields and icons. Both forms include fields for Name, Phone, Area, Address, City, State, Zip, Email, and Birthday.

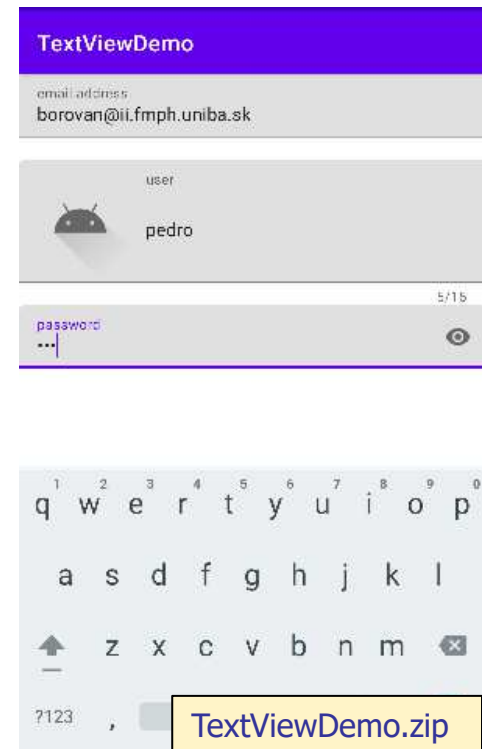

<https://material.io/components/text-fields#usage>

TextViewDemo.zip

TextInput[Layout/EditText]

```
<com.google.android.material.textfield.TextInputLayout
    android:layout_width="match_parent"
    android:layout_height="wrap_content"
    app:startIconDrawable="@drawable/ic_launcher_foreground"
    app:startIconContentDescription="@string/iconDescription"
    app:startIconCheckable="true"
    app:endIconMode="clear_text"
    app:counterEnabled="true"
    app:counterMaxLength="15"
    app:errorEnabled="true">
    <com.google.android.material.textfield.TextInputEditText
        android:id="@+id/userTV"
        android:layout_width="match_parent"
        android:layout_height="wrap_content"
        android:hint="@string/userHint"
        android:maxLength="15"
        android:inputType="textPersonName" />
</com.google.android.material.textfield.TextInputLayout>
```

<https://material.io/components/text-fields#usage>

Príklad jednoduchéj aplikácie

(ktorú sme si vyklikali minule)

Ilustrovali sme:

- príklad návrhu (vyklikania) jednoduchého GUI (single activity app)
- logovanie udalostí ako efektívny prostriedok ladenia pomocou
 - `Log.d(...)`
 - `Toast.make(...)`
 - `Snackbar.make(...)`
- používanie Image/Vector Asset (drawable/mipmap)
- používanie resource editora (pri definovaní strings.xml)
- používanie layout editora pri tvorbe rozhrania (ešte bude)
- eventhandler (`.setOnClickListener`) previazané cez
 - `findViewById<Button> (R.id. quitBtn)`
 - `prevBtn.setOnClickListener({ })`
 - property `android:onClick="nextOnClickListener"`

Nestihli sme:

- aktivitu a jej životný cyklus

Pikas2.zip

Logovanie

(rekapitulácia)

Tri najbežnejšie spôsoby:

- Log – loguje do okna Logcat, filtrujte podľa **TAGu** metódy `Log.d(TAG,`
- Toast – potrebuje **Context** (zjednodušená aktivita, v ktorej sa toastuje)
- Snackbar – to chce pridať závislosť do build.gradle a import snackbaru

```
dependencies {  
    implementation 'com.android.support.design:28.0.0'  
    import com.google.android.material.snackbar.Snackbar
```

```
prevBtn2.setOnClickListener({  
    → Toast.makeText(this, "prev...", Toast.LENGTH_SHORT).show()  
    → Log.d(TAG, "prev...")  
    → Snackbar.make(it, "next...",  
        Snackbar.LENGTH_SHORT).setAction("Action", null).show()  
    alebo .setAction(R.string.action,  
        View.OnClickListener { nextOnClickListener(it) }).show()  
    ...  
})
```

Pikas

(rekapitulácia)

activity entry point

```
override fun onCreate(savedInstanceState: Bundle?) {  
    super.onCreate(savedInstanceState)  
    setContentView(R.layout.activity_main)  
    var i = 0  
    var imgs = arrayOf(  
        ContextCompat.getDrawable(applicationContext,  
            R.drawable.butterfree),  
        ...  
    )  
    imageView2.setImageDrawable(imgs[i])  
    prevBtn2.setOnClickListener({  
        Toast.makeText(this, "prev...", Toast.LENGTH_SHORT).show()  
        if (--i < 0) i += imgs.size  
        imageView2.setImageDrawable(imgs[i])  
    })  
    nextBtn2.setOnClickListener({  
        Toast.makeText(this, "next...", Toast.LENGTH_LONG).show()  
        i = (++i)%imgs.size  
        imageView2.setImageDrawable(imgs[i])  
    })  
}
```

View(s)

logovanie

Pikas2.zip

(stav sa mieša s views a logikou – riešenie príde)

const
final

```
val TAG = "PIKAS"
```

```
var i = 0
```

```
var imgs = arrayOf<Drawable?>()
```

```
override fun onCreate(savedInstanceState: Bundle?) {
```

```
super.onCreate(savedInstanceState)
```

```
setContentView(R.layout.activity_main)
```

[illegible]

```
imageView2.setImageDrawable(imgs[i])
```

```
prevBtn2.setOnClickListener { // it:View -> { ... }
```

```
if (--i < 0) i += imgs.size
```

```
imageView2.setImageDrawable(imgs[i])
```

}

}

```
// prepojene cez property android:onClick="nextOnClickListener"
```

```
fun nextOnClickListener(v: View) {
```

```
i = (++i) % imgs.size
```

```
imageView2.setImageDrawable(imgs[i])
```

}

State

▼ Common Attributes

style @style/mystyle

onClick `clickOnNext`

Pikas2.zip

Pikas

(asynchrónnosť - timer)

pomocou `java.util.Timer`

```
Timer("tik-tak").schedule(1000,1000) { // delay, period
    Log.d(TAG, "onTICK")
    cas++
    runOnUiThread { time.setText("Cas: $cas") }
}.run()
```

- nezabudnite na `.run()`
- `runOnUiThread`
 - má argument `java.lang.Runnable`, ktorý vykoná v hlavnom GUI vlákne

```
zabitie timera:
override fun onPause() {
    super.onPause()
    timer.cancel()
}
```

Pikas

(asynchrónnosť – count down)

pomocou `android.os.CountDownTimer`

```
object:CountDownTimer(20000, 1000) { // 20sek, tik po 1sek
                                // how long, period
```

tik

```
    override fun onTick(millisUntilFinished: Long) {
        Log.d(TAG, "onTICK")
        runOnUiThread {
            time.setText("Cas: ${millisUntilFinished/1000}") }
        }
    }
```

game
over

```
    override fun onFinish() {
        Log.d(TAG, "onFinish")
        exitProcess(-1)
    }
}.start()
```

ukončenie appky

Životný cyklus apky

(prvý – zjednodušený nástrel)

global: 0
local: 0
shared: 0

Alt-Insert = Generate Override Implemented Methods:

- `override fun onDestroy()`
- `override fun onPause()`
- `override fun onRestart()`
- `override fun onRestoreInstanceState(Bundle savedInstanceState)`
- `override fun onResume()`
- `override fun onSaveInstanceState(Bundle outState)`
- `override fun onStart()`
- `override fun onStop()`

- do každej metódy dáme kontrolný výpis, aby sme pochopili životný cyklus

```

override fun onCreate(Bundle savedInstanceState?) {
    super.onCreate(savedInstanceState)
    setContentView(R.layout.activity_main)
    Log.d("CYKLUS", "onCreate") // LOGUJTE, LOGUJTE, LOGUJTE
}

```

tag vhodný na filtrovanie

LogCat

(Filtrovane logov)

- 10-13 12:55:41.091: D/Hello(405): onCreate
- 10-13 12:55:41.091: D/Hello(405): onStart
- 10-13 12:55:41.100: D/Hello(405): onResume
- kill
- 10-13 12:56:45.061: D/Hello(405): onPause
- 10-13 12:56:45.681: D/Hello(405): onStop
- 10-13 12:56:45.681: D/Hello(405): onDestroy

Persistencia

(prvý dotyk)

global: 0
local: 0
shared: 0

- **globalCounter** je premenná, ktorá sa
 - pri **onSaveInstanceState** uloží do Bundle (`HashMap<String, Value>`)
 - pri **onCreate(savedInstanceState: Bundle?)** príde táto Bundle ako argument
- **localCounter** je bežná lokálna triedna premená v MainActivity
- **sharedCounter** je premenná, ktorá sa ukladá
 - pri **onPause** sa uloží do **SharedPreferences** (`HashMap<String, Value>`)
 - pri **onResume** sa prečíta zo **SharedPreferences**
- všetky tri premenné sa inkrementujú pri **onPause**

Zistíte, že:

- aktivita, ak zmení orientáciu, tak sa reštartne, vytvorí sa nová inštancia a zavolá sa **onCreate**. Preto premenná **localCounter** sa vynuluje.
- ak si chcete niečo uchovať aj po zmene orientácie aktivity, treba to uložiť do bundle, zapíšete to tam v **onSaveInstanceState** a prečítate v **onCreate**
- ak si chcete niečo uchovať aj po reštarte aplikácie, treba to uložiť do **SharedPreferences**

Bundle?

Bundle má metódy [put/get][Int/Boolean/Char/Float/Any/...]

```
override fun onRestoreInstanceState(  
    savedInstanceState: Bundle?) {  
    super.onRestoreInstanceState(savedInstanceState)  
    globalCounter = savedInstanceState?.getInt("COUNTER")?:0  
    ...  
}
```

```
override fun onSaveInstanceState(outState: Bundle?,  
    outPersistentState: PersistableBundle?) {  
    super.onSaveInstanceState(outState, outPersistentState)  
    outState?.putInt("COUNTER", globalCounter)  
    ...  
}
```

SharedPreferences

SharedPreferences má metody get[Int/Boolean/Char/Float/Any/...]

```
private lateinit var preferences: SharedPreferences
override fun onCreate(savedInstanceState: Bundle?) {
    super.onCreate(savedInstanceState)
    setContentView(R.layout.activity_main)
    preferences = getSharedPreferences("lifecycle",
                                     Context.MODE_PRIVATE)
}
override fun onResume() {
    sharedCounter = preferences.getInt("kluc", 0)
}
override fun onPause() {
    preferences.edit {
        this.putInt("kluc", sharedCounter)
        this.commit()
    }
}
```

Pikas.java

(auto-generovaný Code/Convert Java->Kotlin)

```
i = 0
iv.setImageDrawable(images[i])

quit.setOnClickListener { v ->
    Toast.makeText(this, "BYE BYE", Toast.LENGTH_LONG).show()
    this.finishAffinity()
}

prev.setOnClickListener {
    Log.d("PIKA", "onPREV")
    Toast.makeText(this@MainActivity, "PREV", Toast.LENGTH_SHORT).show()
    i--
    if (i < 0) i = images.size - 1
    iv.setImageDrawable(images[i])
}

next.setOnClickListener { v ->
    i++
    Log.d("PIKA", "onNEXT")
    Toast.makeText(this@MainActivity, "NEXT", Toast.LENGTH_SHORT).show()
    i = i % images.size
    iv.setImageDrawable(images[i])
}
```

Konverzie Java <-> Kotlin

- **Java -> Kotlin**

Code/Convert Java File to Kotlin File (neuzná sa to ako DÚ v Kotlin)

- **Kotlin -> JVM Byte code**

Tools/Kotlin/Show Byte Code

- **Decompile Byte code (to Java)**

```
protected void onCreate(@Nullable Bundle savedInstanceState) {  
    super.onCreate(savedInstanceState);  
    this.setContentView(2131296283);  
    final ObjectRef images = new ObjectRef();  
    final IntRef i = new IntRef();  
    View var10000 = this.findViewById(2131165189);  
    if (var10000 == null) {  
        throw new TypeCastException("null cannot be cast to non-null type android.widget.Button");  
    } else {
```

Čo je Kotlin ?
