### Java vs. Kotlin

tradičný VMA kurz postavený na Java už druhý rok beží v jazyku Kotlin 1.3

#### Dôvody:

- ako iOS má svoj moderný jazyk Swift (3/4/5), aj Android má svoj Kotlin
- Java je trochu skamenelina medzi modernými jazykmi (Swift, Kotlin, Scala)
- Kotlin je Googlom oficiálne podporovaným vývojový nástroj pre Android
- projekt Kotlin má už >7 rokov
- kompiluje do JVM
- funguje s Android Studiom a na JetBrains produkty ste si asi zvykly, sú top
- oboznámite sa s niektorými princípmi moderných jazykov
- Reference: <a href="https://kotlinlang.org/docs/reference/">https://kotlinlang.org/docs/reference/</a>
- Online: <a href="https://play.kotlinlang.org/byExample/">https://play.kotlinlang.org/byExample/</a>

### Why Teach Kotlin

- Kotlin is basically <u>becoming the language of Android</u>.
- <u>Decrease in boilerplate</u> helps us to quickly identify which fundamental Android concepts students are missing.
- On numerous courses, where we proceed through Java to Kotlin, we are considering a Kotlin-first approach.
- Students are happy to have the chance to program in something they may have heard about.
- I think our students benefit in general from being exposed to a wide range of programming languages, and I think it is valuable for them to gain experience in using more modern languages alongside the more traditional ones like Java and C++.
- My Kotlin students in fact understand OO concepts better than my Java students do.
- One of Kotlin's advantages is a good combination of strong typing and nullability.

### Ako si skúšať Kotlin v AS

(kým sa nedozvieme viac)

```
class MainActivity : AppCompatActivity() {
 override fun onCreate(savedInstanceState: Bundle?) {
   super.onCreate(savedInstanceState)
   setContentView(R.layout.activity main)
   //println(fact(10))
   for (i in 0..10) {
     Log.d("TAG", "$i ! = ${fact(i)}")
     // vypisuje do konzoly Logcat, pouzite filter s "TAG"
     tv.text = "$i ! = ${fact(i)}"
     // vypise do View komponentu, ktory je v Activite
     Toast.makeText(this, "$i ! = ${fact(i)}",
        Toast. LENGTH SHORT). show()
     // Toast alias Notifier (MITI)
 fun fact(n : Int) : Int {
   if (n == 0) return 1
   else return n * fact(n-1)
